

J-Pac “Propeller” Installation

1. Open http://jordanpropeller.com/updates/jpac5_download.html in a browser such as Internet Explorer, Firefox, or Chrome.
2. Click on the link for “Jpac_5_Propeller.zip”
3. When the dialog box appears, select “Save.”

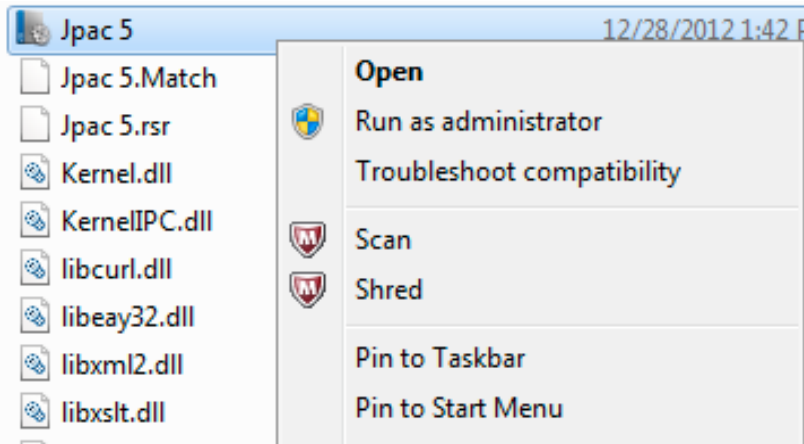

4. When the download is complete, open your Downloads folder and find the “Jpac_5_Propeller.zip” file. Right-click on this file, and choose “Extract All.” Wait until the extraction process is complete. (This may take a few minutes.)
5. Once the extraction is complete, open the folder. Inside, there should be a folder labeled Jpac 5. Right-click on this folder and select “Cut” from the list of possible actions.
6. Navigate to your C: drive, and right-click in a space where no other folders or files exist. Select “Paste” from the list of possible actions. This will place the Jpac 5 folder at the root level of your computer.

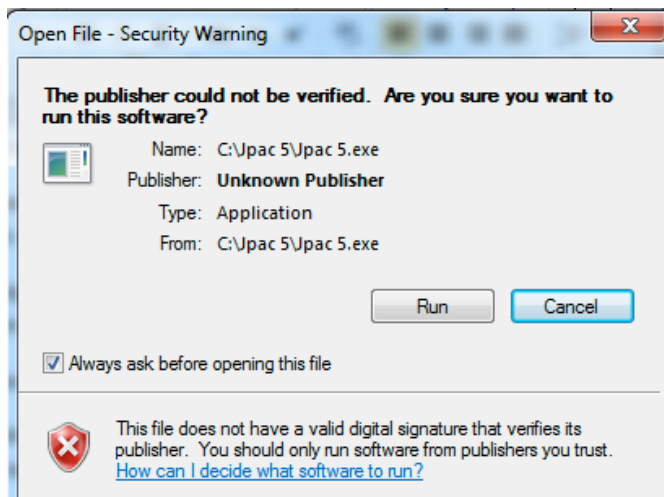

7. If you have a folder at this location labeled “Jpac NW 4.1” (or something similar), you may delete it. Jpac 5 replaces 4.1.

8. Once the Jpac 5 folder is at the root level of your computer, double-click to open it. Scroll down to find the application, named Jpac 5.
9. Right-click on the application file, and select either “Pin to Taskbar” or “Pin to Start Menu.” This gives you easy access to the application.

10. Double-click the Jpac 5 application icon to open the file. If you get a security message like the one below, uncheck the box before “Always ask before opening this file” and select the “Run” option.

11. When Jpac 5 opens, select “Propeller” from the list of login options and click “Connect.”
